Phone: 520-777-7092

TUCSON, AZ: April 11, 2022: At a news conference planned for **Wednesday April 13 at noon ET**, Truth For Health Foundation will announce the launch of a global *Citizens Vaccine Injury Reporting System (CVIRS)™* –in English, Spanish, and Chinese—for those harmed by the Emergency Use Authorized (EUA) COVID 19 shots.

Promising to be the most accurate, accessible and complete vaccine injury reporting system in the world, the public will be able to, for the first time, easily and confidentially report their injuries and side effects without fear of reprisal as well as receive resources for developing a treatment plan to recover health.

The Video News Conference is being live-streamed by Life Site News and multiple livestream platforms. RSVP to Info@TruthforHealth.org for a link to participate.

The Foundation's new Citizens Vaccine Injury Reporting System (CVIRS)™ will serve as an alternative to the Centers for Disease Control's Vaccine Adverse Events Reporting System, which is known to extremely underreport harms of the experimental Covid shots. The CDC's VAERS makes it difficult for people to report vaccine injury; takes too long to complete; is not easily accessible to the public. CDC has not been timely in recording data and reporting to the public.

The news conference will feature first-hand testimony on vaccine injuries; data from insurance companies who are seeing exponentially higher death claims since the COVID shots were administered; and information about how to test and successfully treat side effects and injuries from the COVID shot.

“Our findings on vaccine safety will be reported to the public in contrast to what the CDC should be, but isn't doing,” said independent physician Elizabeth Lee Vliet MD, President and CEO of Truth For Health Foundation, a 501(c)(3) public charity. “We do not receive any funding from the government, big pharma, big insurance, or healthcare systems which, frankly, have agendas tied to their funding. We answer to no one but the

public, whose broad-based donations support our work. Our physicians and scientists are volunteering their time.”

Dr. Vliet said that any change in a person’s health or worsening of medical conditions since they received the COVID shot can and should be reported to the Citizens Vaccine Injury Reporting System.

“We have addressed every organ system in the body. This data will be tracked and analyzed by our volunteer Advisory Council epidemiologists, physicians, and scientists,” she said.

The Citizen’s Vaccine Injury Reporting System is designed to be very user friendly. People can actually fill out a report on their cell phone in less than 20 minutes. It is available in English, Chinese and Spanish at <https://www.truthforhealth.org/vaccine-injury-report/> .

In addition, the Truth For Health Foundation website provides resources for the treatment of vaccine injuries and developing a long-term health recovery plan.
